

Aligning AGM commentary to our investment thesis

Nanoveu Ltd (ASX:NVU) has made a number of announcements since our initiation and recently held their AGM, providing further commentary. Relative to our forecasts and investment thesis we make the following observations. **Revenue** – 1H21 revenue is on-track to be at least \$280k, which compares to our forecast of \$575k and the PCP of \$17k. The ramp-up of revenue post commercialisation is difficult to forecast particularly when there are a number of distributors globally. The key to a material ramp-up in our view is the marketing material that potentially comes from the release of the peer-reviewed Nestle study comparing the effectiveness of Nanoshield against other technologies already in the market. This is due any month now and should provide distributors with valuable sales ammunition. **Laminating machines** (Customskins) now on the ground in Singapore offering a range of mobile phone screen protectors with accuracy of 150 microns for both flat and curved screens. We have nothing in our numbers for this initiative but have highlighted the importance of penetrating the mobile phone market given its size and margin potential. **EPA-approved US supplier of Cupron materials** MoU for use in Nanoshield products, which bypasses the often time-consuming and expensive EPA approval process in the US, promising more immediate sales in this region. **Other product development** continues in the form of EyeFyx, with a beta product expected in CY21 prior to mass launch in CY22. EyeFyx is designed to correct the output from digital displays for people suffering far sightedness or presbyopia. Our numbers have nothing specifically for EyeFyx, and instead focus on the medium-term potential of Nanoshield sales using performance targets (for both staff and distributors) as a guide.

Business model

NVU has developed a number of treated film applications, with the current focus an antiviral & antimicrobial film called Nanoshield. This product is being sold via exclusive B2B resellers, and potentially to OEMs and direct to larger customers. Resellers will typically add a mark-up to the wholesale price in order to fund the value-add required in the form of product application and maintenance. The direct route is more suited to higher volume, cookie cutter products cut to specific dimensions for specific application.

Nestle study details key to sales acceleration

In securing Nestle as the product of choice to protect their out-of-home touch screen coffee machines, Nestle undertook a comparative study of various anti-viral solutions at its Institute of Food Safety and Analytical Sciences, and chose Nanoshield, implying superior performance relative to peers. The detailed results are expected to be peer-reviewed and published any month now in a respected journal. It is this publication that we feel will accelerate Nanoshield sales with marketing material validated by a global food major. Distributors with Minimum Order Requirements (MORs) are in place across ANZ, Singapore, Thailand, Malaysia, UK, Turkey, the Philippines and India.

Valuation implies \$19.5m market cap vs \$8.5m currently

We are at the very early stages of product recognition and distributor sign-up, and as a result, framing the take-up in terms of revenue and resulting profit is a somewhat subjective exercise. Our sales assumptions to derive a DCF of A\$0.124/share on the current share count (down from \$0.128 due to share issues) is well below that implied for distributors to achieve their (MORs) and around that required for staff to achieve hurdles for performance rights out to FY23.
